

Airline Safety

Improvements of the Industry

Car vs Plane

As you are able to notice that the number of airline incidents has been reducing over the years compared to automobile incidents. Thus making a point on how much the air travel has improved when it comes to safety.

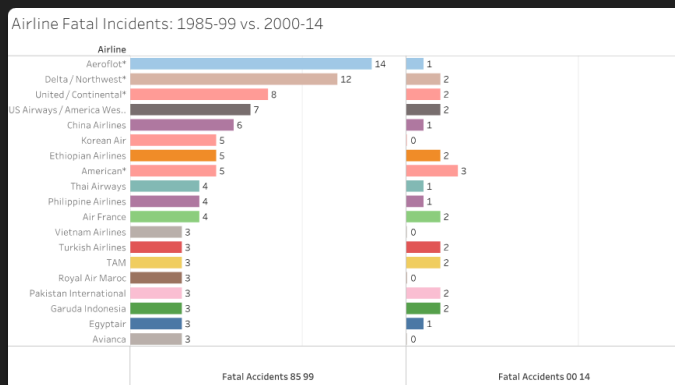

Incidents With Fatalities

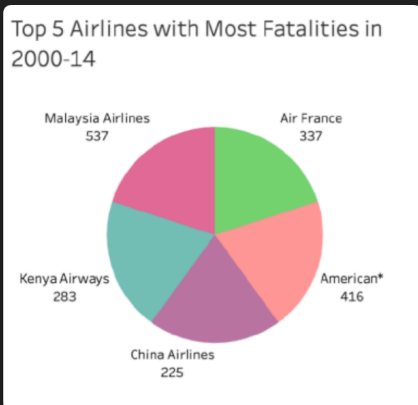

The number of incidents has reduced significantly compared to 1985-1999 and 2000-2014. This is another sign that the industry has improved due to fewer incidents.

Airlines With Fatalities

While the goal for the airline industry is to have zero incidents and fatalities, comparing the years you can see a massive decline in incidents within specific airlines that have implemented changes to reduce future incidents.

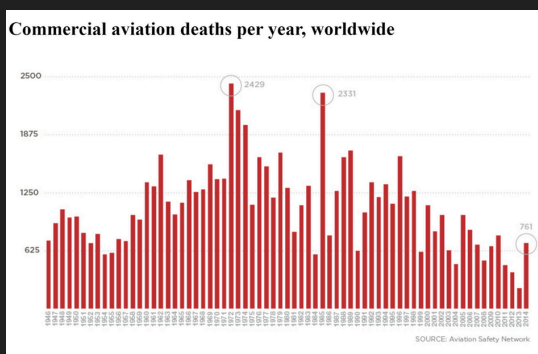

Airlines With Most Fatalities

While the airline industry has developed better safety standards, during 2000-2014 there were still incidents that resulted in fatalities. This would show the top airlines that have had incidents with fatalities

Airline Fatalities Worldwide

This represents airline incidents that resulted in fatalities worldwide, to be more specifically 1985 was the largest when looking at the years 1985--1999 compared to 2000-2014

Airline Operating Revenue

Regardless of the incidents that many airlines have suffered, the industry's revenue is still able to grow. This shows that the industry can grow despite having some bumps on the way.
